## **BS PETeco: instruction for cleaning, daily maintenance, transport and storage**

### **1. Transport conditions:**

- Products made of PET should be protected against precipitation, moisture and direct moisture exposure to sunlight.
- The elements should be transported in a horizontal position and the edges of the load should be secured against damage, dirt and getting wet.
- The loading space intended for transport should not have any protruding, sharp elements that may damage the material. The environment adjacent to the load should be maintained in proper cleanliness.

### **2. Storage conditions:**

- Products made of PET should be stored in a horizontal position and fully protected against contamination, damage or deformation.
- The room intended for storing the PET material should have a stable temperature. The humidity should not exceed 60%.
- The stored material should not be located close to heating devices.

### **3. Cleaning tips:**

- Dirt such as dust, sand or crumbs resulting from everyday use should be cleaned regularly. They should be removed with light vacuuming. Always use a furniture brush in the direction of the gain. You shouldn't wait until visible signs of dirt will appear.
- In order for fibres to retain their original appearance as long as possible, the product should be wiped damp from time to time by chamois leather in the direction of the fibres. Do not use microfiber cloths!
- It is best to remove stains immediately after they occur. Spilled liquids should be wiped up immediately with an absorbent cloth – in this case the liquid does not penetrate the material.
- First, use distilled water for cleaning. Clean it as thoroughly as possible, always from the outside to the inside so as not to make the stain larger. If the water is not enough to clean, difficult stains can be removed by the liquid which

contains quaternary ammonium salts or 30% ethyl or isopropyl alcohol. The liquid should be selected according to the type of dirt. It is recommended to make a trial cleaning in a small area in an inconspicuous place to ensure that the cleaning procedure does not damage the material. After cleaning You have to carefully remove any cleaning agent residue as it may cause rapid re-soiling.

The above care treatments are guidelines and the results of these actions may depend on the condition from variables beyond the producer's control. BARWA SYSTEM is not responsible for any loss or damage that may result from the use of the cleaning procedures listed. If there will be the situation that you will need further assistance with cleaning and maintaining BARWA SYSTEM products, we recommend contacting the company which specializing in cleaning this type of dirt.

To avoid poisoning or personal injury, always read the directions for use included of cleaning product. Do not mix cleaning products on your own as this may result cause toxic fumes that may cause breathing problems. When using cleaning preparations, personal protective such as protective clothing, gloves and glasses.

The customer is responsible for the proper storage and cleaning products made of PET. The information contained in this manual may be updated from time to time. Always the latest version applies.
